LogBox Release Notes

Version 1.6

<https://coldbox.assembla.com/spaces/coldbox/milestones/273527-logbox-1-6>

- coldbox-1128 Do convenience methods for log checks: canDebug(), canInfo(), etc.
- coldbox-1129 Better documentation on logging classes and levels
- coldbox-1139 Enhance the logEvent class to have a better serialization schema for extraInfo, it can use convention \$toString() and json
- coldbox-1147 LogBox category parsing needs a length check when the category sent is blank
- coldbox-1154 performance tuning

Version 1.5

<https://coldbox.assembla.com/spaces/coldbox/milestones/246233-logbox-1-5>

- 1108 db appender failure when declaring a columnMap, instance.columns not defined New
- 1059 implicit logging levels are not changing on max level only but both, misconceptions Fixed
- 1062 added concatenation possibilities to all programatic configuration methods, so you can concatenate them jquery style

Version 1.4

<http://coldbox.assembla.com/spaces/coldbox/milestones/222897-logbox-1-4>

- 1006 Fixes to DSL when doing appender affinity, not converting log levels to numeric Fixed

- 1007 logLevels isValidLevel not assuring a valid level wrong boolean operation Fixed
- 1008 appender() not doing level checks Fixed
- 1009 refactoring the log levels argument types to consolidate them at the three input methods thanks to brad wood Fixed
- 1010 Appender registration an init() not registering the log levels correctly Fixed
- 1011 refactor logger and appender to verify logging levels sent via init() Fixed
- 1032 Update the ensurance of datasources and let CF throw exception instead
- 1054 Creation of XML schema for LogBox Fixed

Version 1.3

<http://coldbox.assembla.com/spaces/coldbox/milestones/187467-logbox-1-3>

- Varscoping issue for DBAppender
- Varscoping issue for Logger object
- fix for category inheritance issues on locateCategoryParentLogger thanks to Sean Corfield
- fixes when declaring appenders and * appenders on XML declarations
- Add the ability to configure levels of logging on Appenders as a last line of granularity (some nice candy)

Version 1.2

<http://coldbox.assembla.com/spaces/coldbox/milestones/153095-logbox-1-2>

- Added some new methods: resetAppenders(), resetCategories and resetRoot() to reset some configurations.
- Fixes on appender declarations and layouts
- Addition of the LogBox DSL to coldbox configuration files
- Ability to configure LogBox via a simple CFC with a simple configure() and a logBox variable

Version 1.1

<http://coldbox.assembla.com/spaces/coldbox/milestones/127903-LogBox-1-1>

- 890 add all appenders to a logbox category by default even from coldbox apps
- 891 category definitions should allow the * for appenders when defining them, instead of listing them
- 907 Async Appenders need way to distinguish between threading and not
- 910 LogBox standalone is now refactored to work under the logbox namespace
- 941 new properties for EmailAppender: useTLS and useSSL

Version 1.0

- Initial LogBox Release
