## MockBox Release Notes

### Version 1.3

<http://coldbox.assembla.com/spaces/coldbox/milestones/187465-mockbox-1-3>

- 1003 addition of \$atMost() and \$atLeast() call count verifications to the \$verifyCallCount methods
- 1057 mocking argument normalization, diff expectations when name-value or positional argument calling.
- 1140 new alias verification: \$never([methodName]) to check if no interactions have been made on mock or specific method
- 1142 new alias verification: \$once([methodName]) to check if the mock has been called one time or a specific method name
- 1144 change all mock methods to their \$ name equivalents on the MockBox CFC so they are documented like so.
- 1145 New method \$reset() to give you the ability to clear all mocking counters and loggers, useful for quick resets

### Version 1.2

<http://coldbox.assembla.com/spaces/coldbox/milestones/153097-mockbox-1-2>

- Added new method: \$verifyCallCount(count,[methodName]) that can assert how many times a component's methods have been called, or how many times a specific method has been called. Basically, it returns a boolean according to the passed expected count calls.
- mockMethodCallCount() the methodname is now optional and it will return to you the TOTAL number of calls that have been made for ALL methods in the mocked CFC.

### Version 1.1

<http://coldbox.assembla.com/spaces/coldbox/milestones/127905-MockBox-1-1>

- 911 Standalone version should be refactored into its own namespace
- 940 new method querySim() to help simulate queries

## **Version 1.0**

- Initial MockBox Release
